Recipes: (productName (FK), materialName(FK), amunt, unit)

3. SETUP Guide:

To set up the program you need to unzip the project and open it in Java IDE with existing

gradle. We have not added extra files and we have used our own database from another

project. If you want to use your own, be sure to change the credentials in database.java file

with your own database. When everything is connected just run the main file and it should be

working
